# FINAL CALL FOR PARTNERS for trial to protect vulnerable road users

Cycle Safety Shield is conducting a three-month trial of the lifesaving collision avoidance system for HGVs and Buses and inviting European companies to take part.

Due to the volume of interested companies and countries we have now extended the start date to the 1st August and opened the trial to international companies.

The trial will consist of installing the multi award winning cycle safety shield technology and 360-degree CCTV system.

**We have also launched a new integrated software package for the system which allows the user to benefit from the following:**

-  **Improved employee safety – reduce the number of incidents and safety orientated events**
-  **Reduce incident associated costs both direct and indirect (loss of man hours, vehicle downtime, insurance rates etc.)**
-  **Improved fuel consumption**       **Structured driver reports**
-  **Full video recording and analytic data capture**
-  **Reduced Insurance premium**

Transport authorities and associated Council boroughs will be able to view potential incident hotspots in real time and investigate the area prior to a collision occurring, therefore anyone committed to be involved in the trial will receive the incident prevention software system free of charge, and the cycle safety shield system and 360 cameras at a heavily discounted price.

We are looking for a variety of different companies operating LGVs, Buses, Coaches, construction & refuse vehicles etc. to take part.

Any other transport authorities or governments who would like to get involved to review the benefits of the incident prevention software, can be given free access to do so for the trial period.
